

How To Display 24 Hour Time

On the Zee S2 and SEL, you can make a change so HS3 displays times in 24 hour format.

To ensure that HS uses the 24 hour format:

1. SSH to your unit, log in, then go to the HS folder with:
2. `cd/usr/local/HomeSeer`
3. Now edit the `autostart_hs` file. This file contains the locale that the unit will run under. The first line is:
4. `export LANG=en_US.UTF-8`
5. Change this line to the locale you want to use, 24 HR time will be displayed if you set it to:
6. `export LANG=en_GB.UTF-8`
7. You can edit the file with the command:
8. `sudo nano autostart_hs`
9. After making the change, type CONTROL X to save and exit.
10. Reboot the unit and HS will now display times in 24 hour format.

Note: On the Zee S2 you may need to generate the locale you want to use (GB is already there). Run the following command to enter a tool where you can generate new locales:

```
sudo raspi-config
```

Select the "Internationalisation" option to select the locale you want generate.
