

# GetEventRefByName

## Purpose

This function returns the event reference for an event. The event reference is only needed for other procedures which explicitly require the event reference ID.

This will only return the reference to the first event matching the name provided.

## Parameters

Parameter: **Name**

Type: **string**

Description: This is the event name excluding the group, such as "Wake-Up Time".

## Returns

Return value: **reference**

Type: **integer**

Description: This is a numerical event reference ID.

## Example

### Sample Code
