

strEventTriggerGroupData (All)

Purpose

This structure, which is used within the strEventData structure, is used by functions that return information about events. The description of each member is below.

Parameters

Returns

Example

Sample Code

```
Public Structure strEventTriggerGroupData
    Public GroupNumber As Integer           ' The trigger group number for this group of
triggers and conditions.
    Public Triggers As String()           ' The list (array) of triggers in this group
in trigger_type : trigger_name format.
End Structure
```
