### Alexa Smart Home Skill Integration

This integration allows HomeSeer users to control their **devices** and device **features** with simple commands using Amazon's Smart Home skill API. This implementation supports ON, OFF, DIM and THERMOSTAT devices for direct control and users can create **Routines** to control other devices with custom phrases. Users who wish to also launch events or control other devices should consider enabling our [Home Automation Skill](#) as well.

### Alexa Home Automation Skill Integration

This integration uses a custom skill that allows HomeSeer users to control all of their **devices**, **features** and events. The voice syntax is a bit more complex than it is with our [SmartHome skill](#) but it provides more complete control of systems.

### Google Home Integration

This integration allows HomeSeer users to control their **devices** and device **features** with simple commands using Google Home powered devices. This implementation supports ON, OFF, DIM and THERMOSTAT devices. This information will allow you to control your HS4 devices via voice and manually via the Google Home app.

### Using Alexa with Multiple HS Systems

Information on using Alexa with multiple HS3 or HS4 systems via MyHS.

### Troubleshooting Google Home & Amazon Alexa

There are certain things that can cause a snag in setting up the link between your HS4 system and home assistants like Google Home and Amazon Alexa. The steps below should get you up and running, but feel free to reach out to [support](#) if it still isn't working.
