

EventExists (Event_Info_Group)

Purpose

This function checks if a given events exists in HomeSeer's event list.

Parameters

Parameter: **name**

Type: **string**

Description: This is the name of the event. The name is not case-sensitive.

Returns

Return value: **event index**

Type: **boolean**

Description: This returns TRUE if the given event exists and FALSE if it doesn't.

Example

Sample Code

```
sub main()  
  
    if hs.EventExists("evening") then  
  
        hs.speak "The evening event exists",TRUE  
  
    else  
  
        hs.speak "The evening event does not exist",TRUE  
  
    end if  
  
end sub
```
