

# RecurseFilesEX

## Purpose

This command returns an array of strings that are in the starting directory and all sub-directories within it

## Parameters

Parameter: **Starting Directory**

Type: **string**

Description: The full path to the starting directory to be recursed.

## Returns

Parameter: **file list**

Type: **string array**

Description: The list of files in the starting directory and sub-directories, one entry per array element.

## Example

### Sample Code

```
Function RecurseFilesEx(ByVal SourceDir As String) As String()
```
